

IN THE SPECIFICATION

On page 10, please amend the paragraph starting on line 3 and extending to line 8 as follows:

--The resulting separated and isolated body of target tissue is substantially in the [[sh]] shape of a spheroid, where a spheroid is a rounded shape generated by revolving a [[sh]] shape around ~~round~~ an axis. By substantially in the shape of a spheroid is meant that the shape approximates a spheroid, and so is, e.g., roughly spherical, or elliptical, but may have an irregular shape that only generally approximates a spheroid. For example, the shape of the isolated body of tissue may be roughly cylindrical or conical.

Please amend the paragraph starting on line 19 of page 10 and extending to line 2 of page 11 as follows:

For removal of diseased tissue such as breast cancer, the size of the body of target tissue to be removed is usually selected to be significantly larger than the diseased tissue to ensure than all of the diseased tissue is removed. Where an isolated body of targe target tissue is found to have healthy tissue surrounding more--
